Part 1.2

# Bring Clonezilla to ODMs

# How I feel about Clonezilla

1-2 hours

```
http://clonezilla.sf.net, http://clonezilla.cnic.org.tw
Clonezilla live
Clonezilla live (to BIOS, boot sector can be removed later)
Clonezilla live (no framebuffer)
Clonezilla live (fallback mode)
Local operating system in harddrive (if available)
Memory test using Memtest86+
FreeDOS
Network boot via etherboot
```

Clonezilla

# How I feel about Clonezilla

Juergen Chiu

Location: Taipei, Taiwan.

- [Clonezilla helps me a lot in system backup, recovery and ISO image creating](#) ^TOP^

"In my job, I need to handle different type of system and create the ISO image for customers. Your great tool, Clonezilla, helps me a lot in system backup, recovery and ISO image creating. I only need to download the Clonezilla zip file, and create the bootable usb key in few easy steps, then I can use that key to backup the systems and create the ISO image by the same key. And the key is just the recovery partition as I need. All procedures take me only about 1 hour to finish all stuffs. I love your tool and that is really cover all functions what I need to have in Linux system recovery scope. Clonezilla is the best all-in-one tool that I have never seen before." -- Juergen Chiu, Canonical Ltd. 18 Dec, 2009.

# What ODMs need from Clonezilla

- Need a more friendly UI for factory
- Prefer to have a formal agreement
- How to on-site support
- How to make sure the deployment result
- Large scale deployment support
- Feedbacks

**Thank you for your time**

Q&A
